Order Early BE READY AT PLANTING TIME

Thanking our friends and patrons for their kindness and liberal orders in the past, we solicit a continuance of the same. Send in your orders as early as possible, and induce your neighbors and friends to join their orders with yours, and all send for Alneer's Reliable High Grade Tested Seeds.

Yours very truly,

ALNEER BROTHERS.

To All Planters of Seeds:

We have this year enlarged our book and have included many new and improved varieties. It will be worth your effort to give these a trial. Our seeds have stood the test for half a century; that alone speaks for itself.

Just as soon as you can after receiving our catalogue, take an hour or two and look it over and make out your seed order and send it to us by next mail. It will help us in filling your order promptly, while stocks hold out. It will also help you just as much, for you will have your seeds on hand for planting at the proper time and when the ground is in best condition to receive the seeds.

We thank you very much if you will take notice of this request and for your valuable orders.

PLEASE READ

All seeds are shipped as quickly as possible after the order is received. We always aim to send all the seeds at one time but it sometimes happens that a certain sort of seed is not in stock, and not wishing to delay the whole order on that account we ship the seeds and let that sort follow soon as in. Plants are booked and shipped in proper season; we ship no plants during cold weather on account of danger from freezing. Tender bulbs are shipped in the spring. Fall bulbs are booked and shipped from September to December 1.

SEEDS GIVEN AWAY OR EXTRAS

Every year we distribute free to our customers large quantities of seed packets of choice and rare sorts. The larger the order the greater will be the number of extras thrown in as a rule, exceptions being made only when heavy bulk seeds are ordered, such as farm seeds.

OUR PACKETS

We guarantee that our packets are large size and well filled with choice, fresh seeds. Our customers say that our packets are larger and better filled than most seedmen's packets. We have no half size packets.

WHAT WE WARRANT

We believe that the seeds we offer are excelled by none in the world, yet our practical experience of many years fully assures us of the fact that crops may fail no matter how fresh and pure the seeds sown to produce them may be. Therefore, while we exercise the greatest care to have all seeds pure and reliable, it is hereby mutually agreed between ourselves and the purchaser that we are not in any respect liable or responsible for the seed sold by us, or for any loss or damage arising from any failure thereof in any respect.

OUR PRICES

Have been placed as low as possible for first quality and honest seeds besides the many Extras we shall continue to freely throw in.

As a salad it rivals the finest lettuce, while cooked like cabbage or spinach it makes a delightful "greens." Early sowing is not recommended, as during hot weather it has a tendency to run to seed without heading. Sow seed, in any good soil, the first of August, making rows 24 to 36 inches apart and thinning to 15 inches apart in the row. Pe-Tsai will not stand frost. Pkt. 6c, oz. 25c, ¼ lb. 75c.

Alneer's is really the best seed company that I have traded with so far. I am sending this year again to Alneer's for my seeds.

Alneer's Earliest of All is very hardy, and may be sown as soon as the soil becomes mellow. It may be relied upon to be ready for market in about forty-five days from date of germination. Earliest Carmine Erfurt or "Fire Ball" Radish

Saxa

RADISH

Sow seed as early in the spring as possible in a highly enriched light, sandy soil. The quicker they are grown the more tender and mild in flavor.

Alneer's New Fourteen-Day—This early Forcing Radish is of extremely quick growth, maturing in about two weeks under favorable conditions; the leaves are very short, which renders them particularly adapted for forcing under glass; they are of superior flavor, being crisp and tender, and in color they are a fresh, deep carmine red, very attractive. Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 30c, $\frac{1}{2}$ lb. 50c, lb. 90c.

Saxa This is a European variety which has become very popular in the United States. It is one of the very earliest radishes and quite slow to run to seed. Cooper's Sparkler This type of Radish, having red skin with a white tip, has long been a great favorite, and with this variety the white portion extends much farther up than is the case with ordinary Scarlet Turnip White Tip Radish. The upper portion is a rich, brilliant red, showing in great contrast to the lower portion, which is a pure white, and adding greatly to its attractive appearance. The general contour is turnip-shape, and size medium, very uniform, with flesh crisp, tender and sparkling. The rapidity of its growth recommends "New Sparkler" for growing in the greenhouse, but it is equally as valuable for sowing in the vegetable garden. Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 25c, $\frac{1}{2}$ lb. 45c, lb. 85c.

Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 25c, $\frac{1}{2}$ lb. 45c, lb. 85c.

Crimson Giant This radish is an entirely new type and differs radically from all varieties hitherto in cultivation, in so far as its roots attain more than double the size of those of other forcing varieties, without getting pithy or hollow. It is very early notwithstanding its size. Color crimson, flesh pure white, of the best quality. Fine for outdoors and forcing. Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 25c, $\frac{1}{2}$ lb. 45c, lb. 85c.

Alneer's Golden Champion

The great prize-winning Corn. Now the most popular and most uniformly distinct type of Yellow Dent Corn. Fifty years of careful selection has resulted in remarkable evenness in appearance of ears. It is more accurately described as follows: Ears 9 to 10 inches long, 7 inches around, 18 to 24 rows with narrow space between rows; deep grains with small cob well filled at butt and tip. We offer a very choice selection of seed grown from pedigree seed selections for years. It has won first prizes in competition. Price shelled, qt. 35c, $\frac{1}{4}$ bu. \$1.10, $\frac{1}{2}$ bu. \$2.00, bu. \$3.75.

Pride of Illinois

Ears are borne uniformly at about four feet from the ground, high enough to get the sun and air, low enough to be protected from windstorms. The ears are large, 10 to 12 inches long, nearly cylindrical, holding their size well to the end, are well rounded or capped over at both ends and have that well groomed appearance of thoroughbred corn. The fine shaped grains, which are set in straight rows, are quite deep and broad at the germ end, thus making a solid or heavy ear, and they are of such rich yellow color and uniform size that it is surely the handsomest corn we have ever seen. Qt. 35c, $\frac{1}{4}$ bu. \$1.10, $\frac{1}{2}$ bu. \$2.00, bu. \$3.75.

Sudan Grass

Sudan Grass It was first introduced into the United States in 1909 from Sudan under the name of Garawi. Tests were made in all parts of the United States. As a result of the tests the Department of Agriculture reports that Sudan Grass will be of the greatest value in the western and southeastern states where the rainfall is deficient. The Department also reports that it will make just as good yields in most of the central and northern states, and will grow nearly everywhere. Sudan Grass is strictly an annual and dies each year like Millet. It belongs to the sorghum family. Is best sown broadcast or with a drill when it can be cut with a mower and treated like any other hay. It grows three to five feet high. Produces twice as much hay per acre as any of the common forage plants. Sow about corn planting time, after the ground becomes warm. 10 to 15 lbs. will seed an acre. From Central United States southward it is possible to have from 2 to 3 cuttings. From seeding to cutting 75 to 80 days are required. The second cutting comes on in about 45 days. The yields vary from 1 to 8 tons cured hay per acre. Sudan grass, lb. 30c, prepaid. Not prepaid, 10 lbs. \$1.00, 25 lb. \$2.10, 50 lb. \$3.75, 100 lb. \$7.00.

Feterita A new non-saccharine sorghum, maturing its crop 20 to 30 days earlier than Kafir Corn, making it well adapted to sections with short seasons. Feterita grows about 5 feet high, branching freely from the roots and producing numerous large heads of white grain. It is a remarkable drought resister, producing a crop when all other kinds of fodder fail. The grain is excellent for feeding chickens or any stock. The fodder is much finer than corn stalks, and is highly relished by all stock. For grain sow 5 pounds of seed per acre in hills, or drills. For fodder, sow one-half bushel per acre, broadcast or in rows. Per lb. 30c, prepaid; not prepaid, 10 lb. \$1.00, 25 lb. \$1.60, 50 lb. \$3.00.

Sweet Clover Bokhara (White)

For years considered valuable only for the excellent honey which it yielded, its importance as a soil builder and inoculator for Alfalfa, as a hay crop and as a pasture plant, and its adapt-

ability to generally unfavorable soils and conditions not then being recognized. Now, however, large acreages in some sections are devoted to this crop, and its true value is better known. Sow 20 lbs. per acre. Per lb. 40c, not prepaid ¼ bu \$1.90, bu. \$7.25.

Alfalfa Alfalfa is being more generally grown as experience is teaching our farmers the proper methods to follow. Different soils do not now seem so difficult to overcome, especially when drained, pulverized, sweetened and inoculated. Alfalfa naturally prefers a deep sandy gravelly sub-soil. Roots from 3 to 15 feet deep and a good stand on properly selected land should yield from 3 to 5 cuttings a year. We make a specialty of extra high-grade seed that tests 99 per cent pure or better. Treat your land to a liberal dressing of fine ground lime or more liberally to fine ground limestone well worked into the soil some three months to a year before seeding to alfalfa. Sow from 10 to 15 lbs. well inoculated seed per acre, using Nitrogen. From April 1st to June 15th for the early Spring sowing, either drilled or sown broadcast. If broadcast, cover lightly with a light drag or with single stroke of a harrow. Many prefer sowing from July 15th to September 15th, when seeded late it gives the grower an opportunity to have his land clean and free from weeds.

Hardy North-western Lb. 40c, not prepaid, ¼ bu. \$4.50, bu. \$17.00.

Dept. of Agriculture. Prof. Shepard, of North Dakota Agricultural College says: The eagerness with which it is sought by stock leads me to believe that it is of as much value as timothy for pasturage, and that the hay is as valuable, ton for ton. Being almost hardy, it is not injured by slight changes in the temperature, and its stiff, glossy leaves enable it to stand the dry, hot air of the living room without injury. The leaves are a deep, glossy green, fan-shaped, split deeply into segments. Very graceful for table decorations.

Double Roses, 25c Each

Columbia (Hill, 1918). It is a big Rose, the open flower measuring six inches across. The color is a true pink, about the shade of a perfect Shawyer, deepening as it opens to glowing pink. A peculiarity of the variety is that the shades all become more intense until the full maturity of the open flower is reached and this color is enduring. A great Rose, 40c.

Premier (H. T.) (Hill, 1919) Already too well known to need description. A magnificent novelty in the class with Russell. Deep rose; fragrant; thornless-free. 25c.

Ophelia (W. Paul, 1912) Salmon-flesh shaded with rose large and of perfect shape; of excellent habit, the flowers standing up well on long, stiff stems and produced in great profusion. Excellent for forcing and a fine decorative variety. Growth vigorous. Certainly a glorious Rose. Be sure to have "Ophelia" fixed in your memory. 25c.

Sunburst (Pernet Ducher, 1912) This magnificent giant yellow Rose is a fine forcer; it stands head and shoulders above all other of its color, and will rank with American Beauty and the Kilarnes in value and grandeur. The color is orange-copper or golden-orange and golden-yellow; edge of petals lighter; all intense shades, extremely brilliant in effect. Some call the color cadmium-yellow. It is the yellowest of all Roses. 25c.

A Blue Rose

Veilchenblau, The Blue Rose. (Schmidt, 1900) (H. M.) This is a much better Rose than some give it credit for. It opens a reddish-violet, quickly changing to the violet-blue. 25c.

Galegifolia Alba A popular house plant blooming in sprays of 10 to 20 flowers shaped much like Sweet Peas. A grand everblooming plant, its pure white flowers are now used extensively in cut-flower work. 25c.

It blooms profusely all winter, coming into flower in November.
